

## 2011-2012 FT STEWART/HAAF HUNTING SEASON HARVEST REPORT

The phone check-in/out system was modified to support game harvest reporting when checking out of an area for the 2011-2012 hunting season. Although the hunting season typically starts with the opening of squirrel season in mid-August, the system did not go live until 17 September 2011. Key dates not included in the reported harvest data for this hunting season were the opening weekends of both dove season and deer archery season.

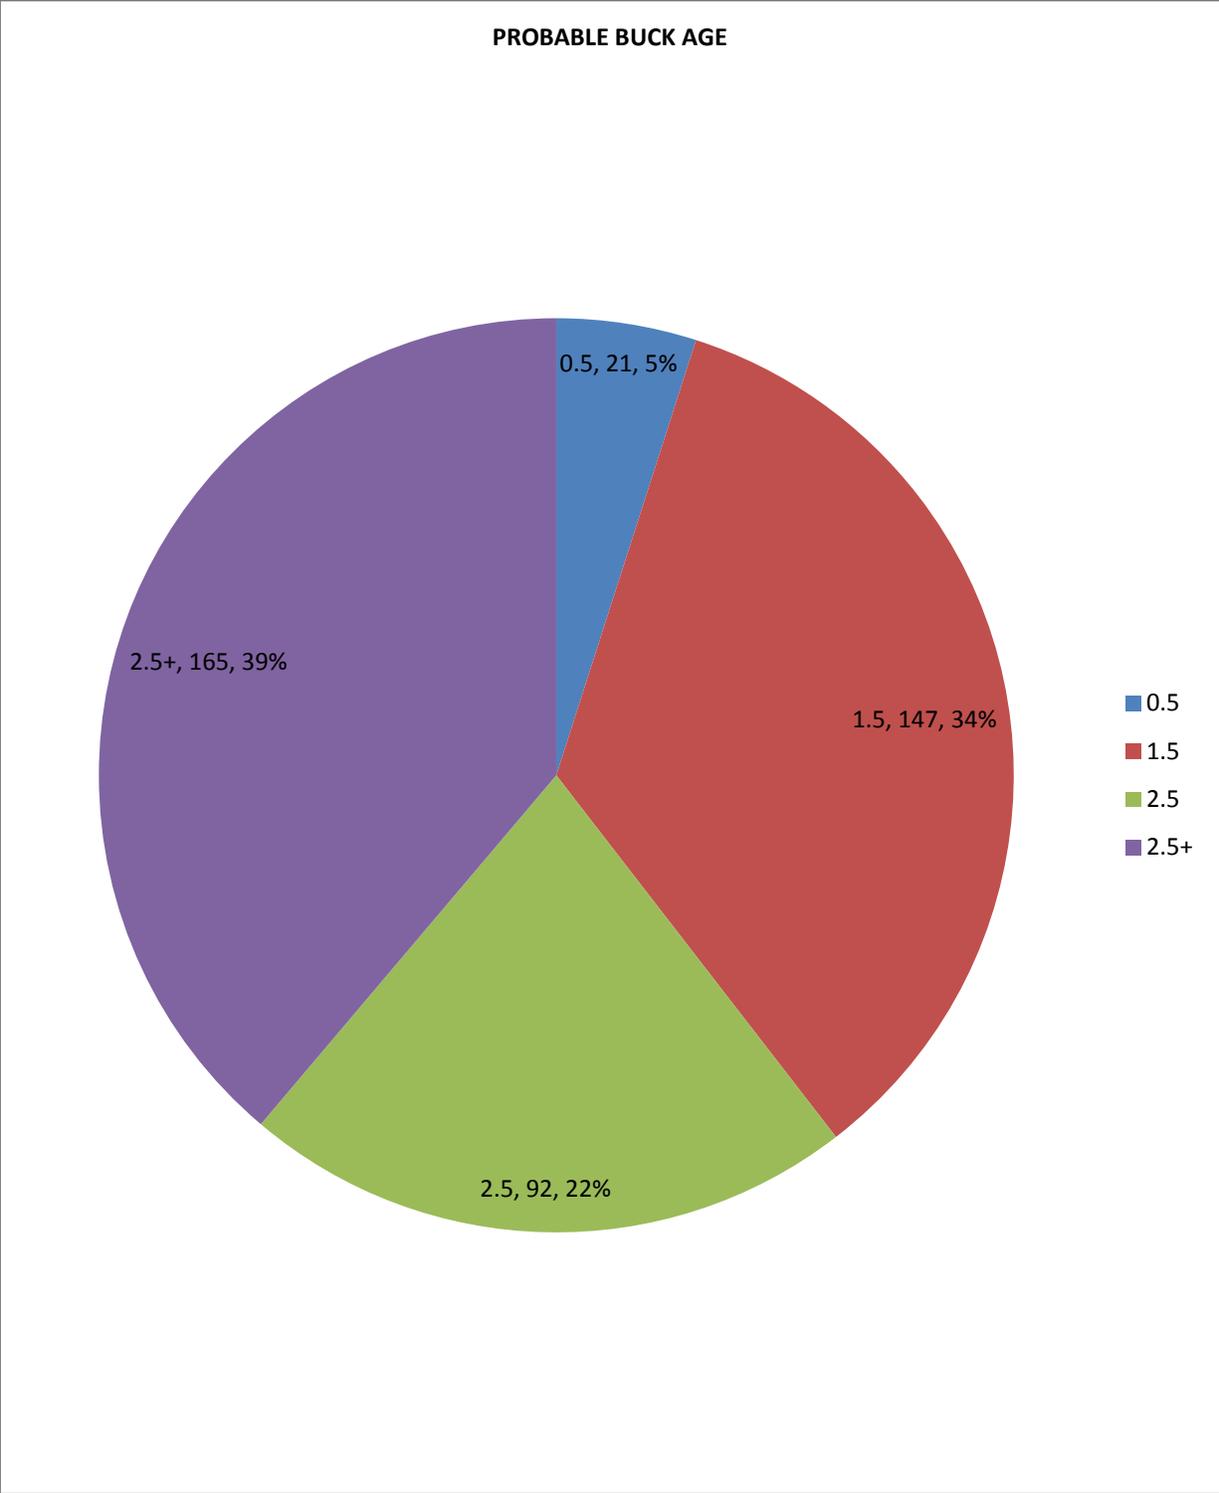

**Figure 1.** Total reported deer harvest for the 2011-12 deer season was 820.

**Figure 2.** The 3 best weeks for deer harvest were: week 6-opening of firearms season, week 11-Thanksgiving weekend, & week 16-Christmas/New Year's Eve.

**Figure 3.** Probable age breakdown for harvested male deer, based on # of points.

**Figure 4.** Feral hog harvest by week during deer season. Peak times for hog harvest were similar to deer harvest. Total reported harvest was 361 hogs.

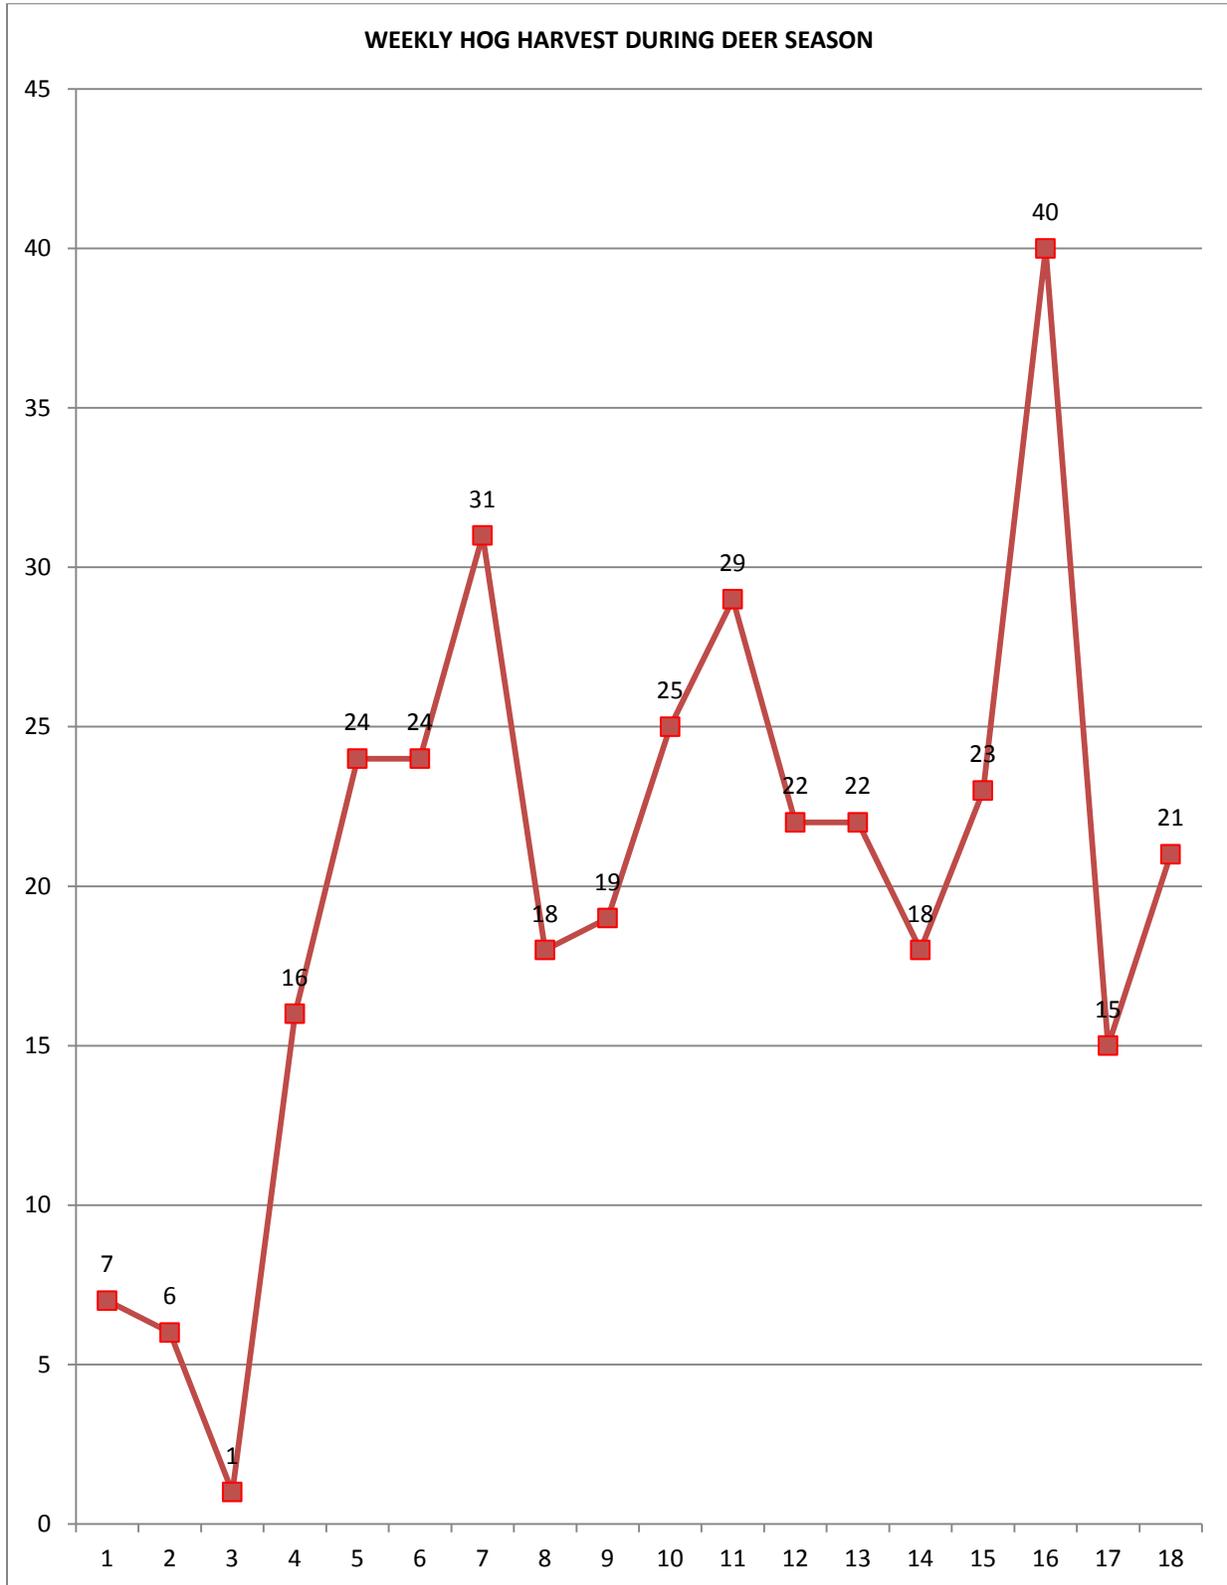

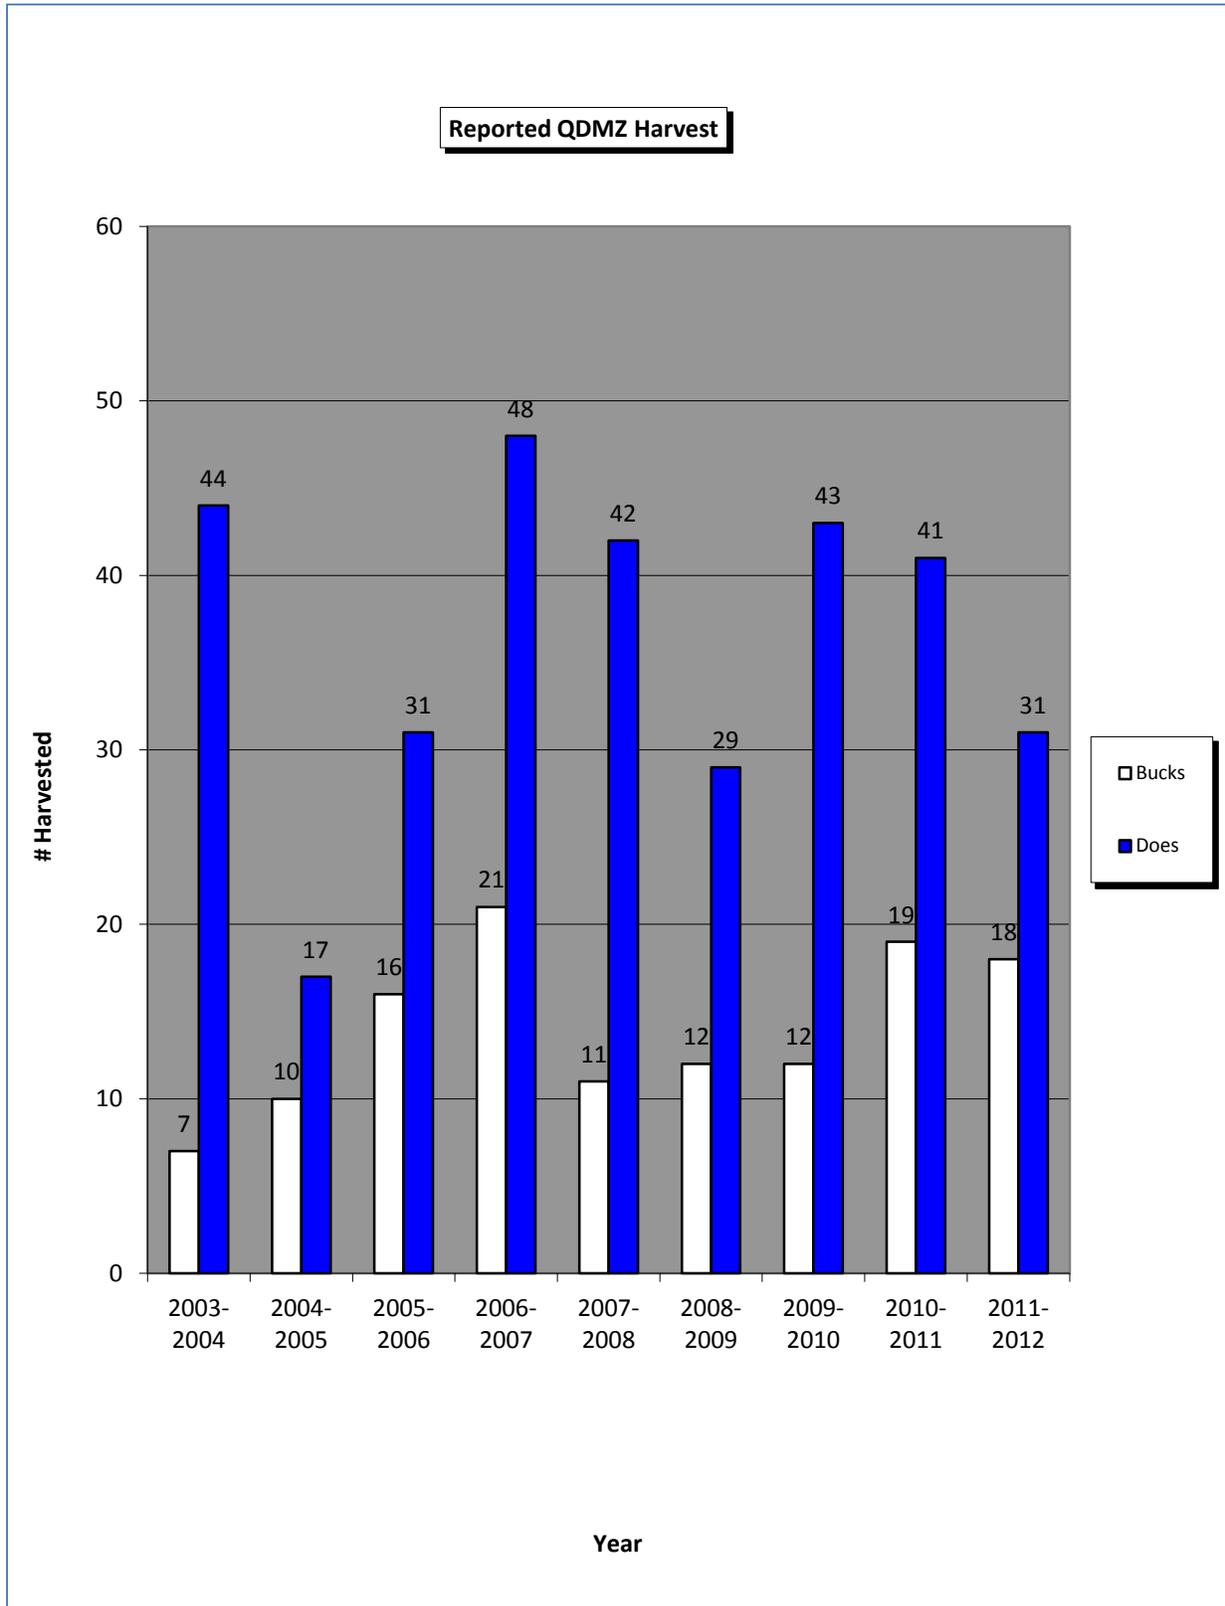

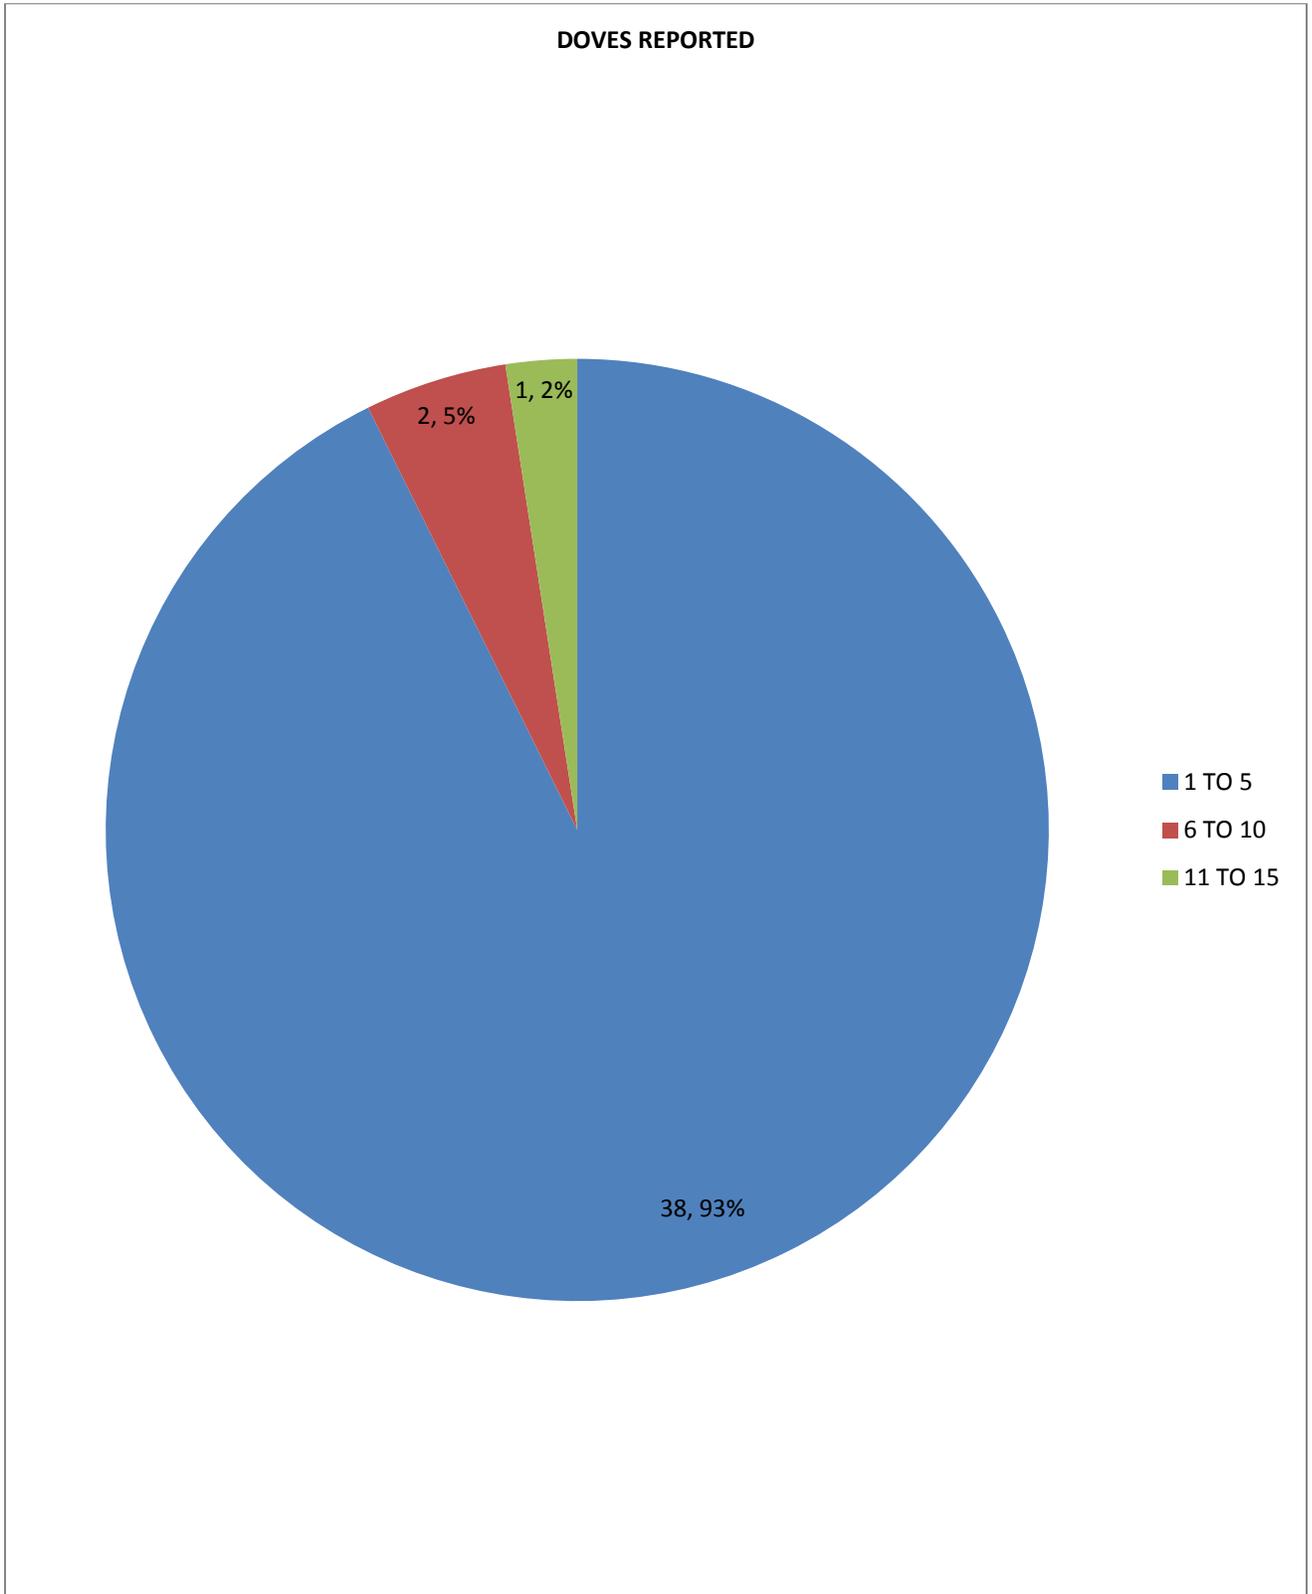

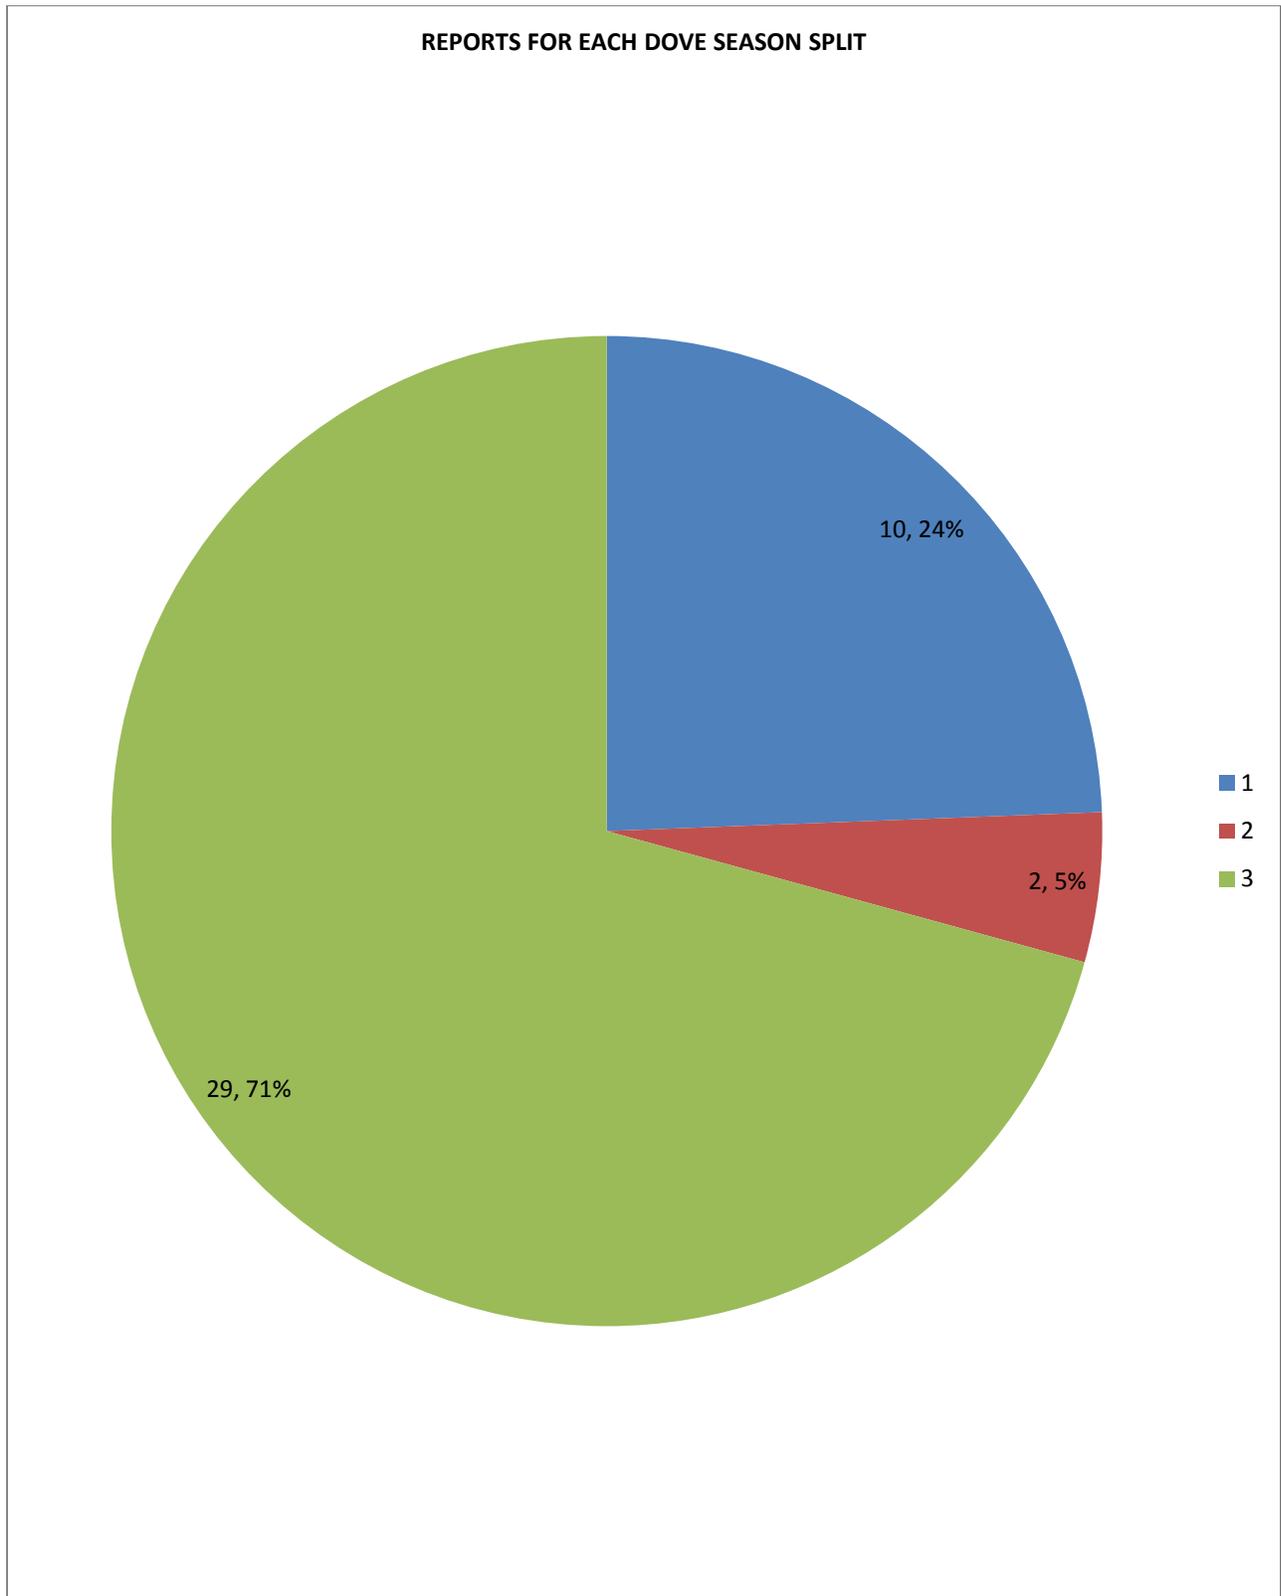

Figure 5. Reported deer harvest for the Quality Deer Management Zone, 2003 through 2011 seasons.

**Figure 6.** Reported dove harvest. Hunters had the option to report in 1 of 3 categories: 1 to 5, 6 to 10, or 11-15. 93% of the reports were in the 1 to 5 category.

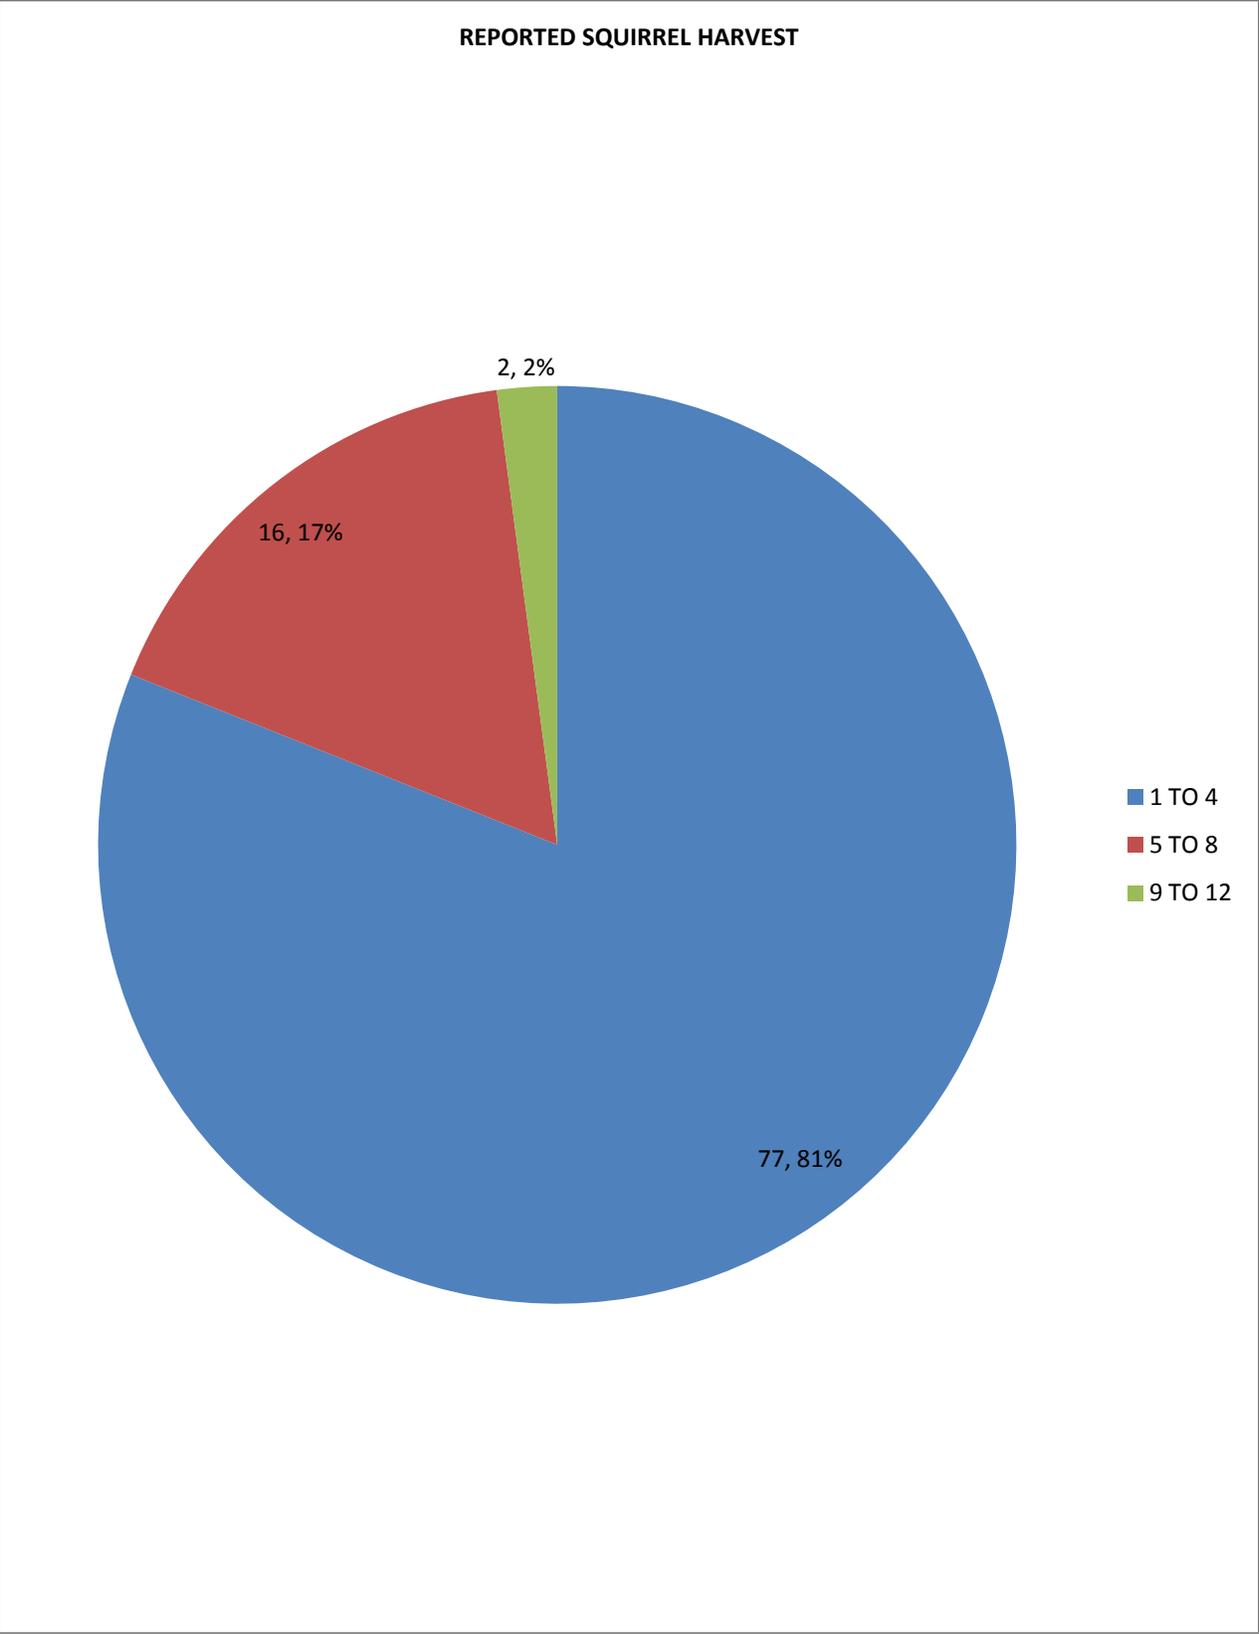

**Figure 7.** Reports for each split during dove season. 71% of the reports were during the 3<sup>rd</sup> dove season split.
