Executive Summary

CAPE Environmental Management, Inc. (CAPE) performed Interim Measures (IM) at the U.S. Army Fort Stewart Solid Waste Management Unit (SWMU) FST-013, Fire Training Area (FTA) site. The IM was conducted under U.S. Army Corps of Engineers (USACE) Contract Number DACA21-97-C-0023 for the USACE, Savannah District.

The project site is the Fort Stewart FTA, SWMU FST-013, located in the central portion of U.S. Army Fort Stewart, Georgia. The FTA is located adjacent to and northwest of Wright Army Airfield as shown in Figure 1. The FTA consisted of a 5,000 square foot, curbed, soil covered concrete pad with a simulated mock aircraft constructed from a used steel storage tank. The general area was used for training of the airfield's firefighters from the time of its construction prior to 1982 until 1992.

A previous investigation directed by USACE in 1995 indicated that soils onsite were contaminated with petroleum hydrocarbons, volatile organic compounds, polynuclear aromatic hydrocarbons and heavy metals. The 1995 investigation also characterized the wastes remaining in the AST and OWS as hazardous. As a result, USACE contracted CAPE to conduct the IM at the Fort Stewart FTA.

The intent of the IM was to remove and properly dispose of the following: an aboveground storage tank (AST) and mock aircraft with associated foundations and piping; the concrete fire training pad (FTP) and cover soils; a concrete oil/water separator (OWS) sump and appurtenances; and, soil and sediments onsite which exceed the Preliminary Cleanup Targets (PCTs) established in the project specifications. Additionally, the site was restored with clean backfill in order to return the site to a usable condition.

The AST, mock aircraft, piping, FTP, OWS, soil and sediments were removed from the site in accordance with the project specifications. Hazardous liquids offloaded from the AST and the OWS were transported to and disposed at Fisher Industrial Service, Inc. located in Glencoe, Alabama. Soil and sediments removed from the site were transported to SoilSafe, Inc. located in Newington, Georgia. SoilSafe, Inc. recycles petroleum-affected soils for use in roadbeds.

After soils were removed from the site, confirmation samples were collected from the base of the excavations in order to assess the native soils remaining onsite. The analytical results of the confirmation soil samples indicated that some of the native soils remaining onsite are above preliminary cleanup targets (PCTs). Analytical results of samples collected in the western drainage swale indicated isolated occurrences of benzo (a) pyrene and benzo (b,k) fluoranthene above their respective PCTs. In addition, laboratory analytical results for arsenic were consistently above the PCT for carcinogenic exposure, which is 0.4 mg/kg; however, all of the analytical results for arsenic were below the PCT for systemic exposure, which is 80 mg/kg. Based on the widespread distribution and consistent low concentrations of arsenic in native soils, it is likely that arsenic is naturally occurring and not a result of past site activities.

Introduction

CAPE Environmental Management, Inc. (CAPE) performed Interim Measures (IM) at the U.S. Army Fort Stewart Solid Waste Management Unit (SWMU) FST-013, Fire Training Area (FTA) site. The IM was conducted under U.S. Army Corps of Engineers (USACE) Contract Number DACA21-97-C-0023 for the USACE, Savannah District. The work was performed in accordance with the project specifications.

The intent of the IM was to remove and properly dispose of the following: an aboveground storage tank (AST) and mock aircraft with associated foundations and piping; the concrete fire training pad (FTP) and cover soils; a concrete oil/water separator (OWS) sump and appurtenances; and, soil and sediments onsite which exceed the Preliminary Cleanup Targets (PCTs) established in the project specifications. Additionally, the site was restored with clean backfill in order to return the site to a usable condition.

The project site is the Fort Stewart FTA, SWMU FST-013, located in the central portion of U.S. Army Fort Stewart, Georgia. The FTA is located adjacent to and northwest of Wright Army Airfield as shown in Figure 1. The FTA consisted of a 5,000 square foot, curbed, soil covered concrete pad with a simulated mock aircraft constructed from a used steel storage tank. The general area was used for training of the airfield's firefighters from the time of its construction prior to 1982 until 1992. Fuel for the training fires was provided by underground piping from an aboveground fuel storage tank that was located approximately 50 feet northeast of the training pad, as shown in Figure 2. Fuels used for the fire training exercises were mostly off-spec jet fuel (JP-4) and diesel fuel; however, waste oils and possibly lead gasoline were also used. During training exercises, fuel was pumped onto the surfaces of the simulated aircraft and ignited. Firefighting trainees extinguished the fire with water or foam. The water was contained by berms around the fire training pad and sump. From there, it drained through an oil/water separator into the western drainage swale. Some of the water and fuel occasionally ran over the concrete berms onto the adjacent soil, and some may have been splashed over the berms by the spray from the firefighting hoses.

A previous investigation directed by USACE in 1995 indicated that soils onsite were contaminated with petroleum hydrocarbons, volatile organic compounds, polynuclear aromatic hydrocarbons and heavy metals. The 1995 investigation also characterized the wastes remaining in the AST and OWS as hazardous. As a result, USACE contracted CAPE to conduct the IM at the Fort Stewart FTA.

■ Construction

CAPE mobilized to the site on October 13, 1997 to set up construction facilities, survey and mark the site construction limits and coordinate the delivery of construction equipment. Prior to the beginning of construction activities, the Contractor Quality Control (CQC) Coordination Meeting and the Site Safety and Health Pre-Entry Briefing were held on October 15 and 16, 1997, respectively. These meetings communicated the systems established by and the objectives of the CQC Plan and the Site Safety and Health Plan (SSHP).

Onsite construction activities began with site preparation on October 17, 1997. Daily onsite construction activities are summarized in Table 1 and in the daily CQC reports included in Appendix A. Site preparation included coordinating delivery of construction equipment, installation of the silt fence around the perimeter of the work area, setting up decontamination facilities, setting up office trailer and other support facilities, performing an initial survey of the site and removing trees and stumps from the work area. The initial survey was performed to verify topographic contours onsite and at the borrow pit site, to establish the work area in accordance with the project specifications Plate C-4, and to mark confirmation sample locations.

AST, Mock Aircraft, FTP and OWS Removal

The AST and mock aircraft removal, FTP removal, and the OWS removal followed site preparation activities. Removal of the AST and OWS incorporated sampling and onsite storage of hazardous liquids contained by each. Also, the product piping was vacuumed to remove any remaining liquids. The product piping was plugged to contain any residual liquids and prevent spillage during piping removal. The AST, mock aircraft, and the OWS were cleaned using a pressure washer, and the decontamination liquids were contained. The AST was

cut for transportation, and a metal recycling facility accepted the AST and mock aircraft. Certificates of disposal for the AST and the mock aircraft are included in Appendix B.

The hazardous liquids from the AST and the OWS were transferred to 55-gallon drums. Liquid and sludge from the AST was transferred to three 55-gallon drums, while the liquids from the OWS were transferred to ten 55-gallon drums. A sample of the liquid and sludge contents from the AST, labeled USTW-1, and a sample of liquid contents from the OWS, labeled OWSW-1, were collected and submitted to Savannah Laboratories and Environmental Services, Inc. (Savannah Laboratories), located in Savannah, Georgia, for laboratory analysis. Savannah Laboratories provided all of the laboratory analytical services for the IM. Savannah Laboratories is certified by the Army Corps of Engineers Missouri District and by the State of Georgia.

Waste samples USTW-1 and OWSW-1 were analyzed for Toxicity Characteristic Leaching Procedure (TCLP) Volatile Organics using EPA Method 8260, TCLP Metals using EPA Method 6010/7000, TCLP Mercury using EPA Method 7470, TCLP Semivolatile Organics using EPA Method 8270, TCLP Pesticides using EPA Method 8080 and TCLP Herbicides using EPA Method 8151. A copy of the laboratory analytical report is included in Appendix D. Results of the waste liquid and sludge samples indicated tetrachloroethylene and methylethyl ketone leached at concentrations of 49 milligrams-per-liter (mg/l) and 290 mg/l, respectively. These concentrations are above the regulatory limits of 0.5 mg/l and 200 mg/l as listed in the Code of Federal Regulations, Title 40, Section 261.24, Table 1, Maximum Concentration of Contaminants for the Toxicity Characteristic. Consequently, and in accordance with the project specifications, these wastes were disposed of as hazardous waste. The hazardous wastes were disposed of at Fisher Industrial Service, Inc. located in Glencoe, Alabama. The manifest and the certificate of disposal for the liquid waste are included in Appendix C.

Next, the cover soils on the FTP were removed and stockpiled onsite on 10 mil polyethylene sheeting on top of fuel-affected soils. The FTP was then cleaned using a pressure washer. All residual decontamination waters were contained in the pump truck onsite. After cleaning the OWS and the FTP, concrete core samples were collected to evaluate the proper disposal method for the FTP and

OWS. Two cores were collected from the western half of the FTP. The concrete core samples were crushed and composited. The composite sample was placed into sample containers and labeled CC-1. Likewise, two cores were collected from the eastern half of the FTP; crushed and composited; and placed into sample containers and labeled CC-2. Also, two cores were collected from the base of the OWS; crushed and composited; place into containers and labeled CC-3. All samples were immediately placed on ice and were transported to Savannah Laboratories under strict chain of custody. The chain-of-custody documentation is included with the laboratory reports in Appendix D. The concrete core samples were analyzed for TCLP Volatile Organics using EPA Method 8260, TCLP Metals using EPA Method 6010/7000, TCLP Mercury using EPA Method 7470, TCLP Semivolatile Organics using EPA Method 8270, TCLP Pesticides using EPA Method 8080 and TCLP Herbicides using EPA Method 8151.

The analytical results of the concrete core samples collected from the OWS and the FTP indicated no reportable concentrations of TCLP Volatile Organics, TCLP Metals, TCLP Mercury, TCLP Semivolatile Organics, TCLP Pesticides or TCLP Herbicides. Consequently, the concrete debris was transported to the SoilSafe, Inc. (SoilSafe) facility located in Newington, Georgia and disposed as non-hazardous, non-regulated construction debris.

Preparations for Soil Removal Activities

During the demolition of the AST, OWS and FTP facilities, CAPE personnel collected two composite soil samples, one from the FTP cover soils and one from the native soils to be excavated. Each sample was composited from four aliquots collected at four separate locations throughout the FTP cover soils and the native soils, respectively, as shown in Figure 4. Aliquots collected from the native soils were also collected at various depths (6 inches, 2 feet and 4 feet below ground surface [bgs]). The aliquots were collected using a decontaminated stainless steel hand auger, and the aliquots were composited by mixing them in a decontaminated glass bowl using a decontaminated stainless steel spoon (decontamination procedures are discussed in the Chemical Quality Assurance/Quality Control section). The composite sample collected from the FTP cover soils was labeled COM-1, and the composite sample collected from the native soils was labeled COM-2. The samples were collected in order to identify

any potential Resource Conservation and Recovery Act (RCRA) hazardous characteristics of the soil and to complete a waste profile for SoilSafe, the selected soil disposal facility. Both samples were immediately placed on ice and were transported to the laboratory under strict chain of custody. The chain-of-custody documentation is included with the laboratory report in Appendix D. The samples were analyzed for TCLP Volatile Organics using EPA Method 8260, TCLP Metals using EPA Method 6010/7000, TCLP Mercury using EPA Method 7470, TCLP Semivolatile Organics using EPA Method 8270, TCLP Pesticides using EPA Method 8080 and TCLP Herbicides using EPA Method 8151.

The analytical results of COM-1 and COM-2 indicated no reportable concentrations of any TCLP constituents. Therefore, the soil was not characterized as a RCRA hazardous waste and was acceptable to SoilSafe as non-hazardous, regulated waste soil. A copy of the soil profile is included in Appendix E. SoilSafe combines the soil with fixing agents (Portland cement) and uses the end product as sub-base for roads, parking lots, foundations and other construction projects. The treatment process both micro- and macro-encapsulates the soil and creates a matrix that does not leach contaminants.

After the AST, OWS and FTP facilities were removed, excavation and backfilling of soils within the project limits began. Soils excavated were immediately placed in tandem dump trucks equipped with cover skirts and locking rear doors. No excessively wet soils were removed from the excavations, so sealed beds were not required. All trucks were inspected to assure that the skirts were not torn, the rear doors were locking and no soil could leave the bed during transport. Before trucks left the site, preprinted manifests were signed by Mr. Randy Jones of the Fort Stewart Directorate of Public Works, Environmental Department and by the drivers. The trucks were weighed on a scale located on the route to the SoilSafe facility.

After soils were excavated from the site as depicted in Figure 3, confirmation soil samples were collected using a decontaminated stainless steel hand auger and decontaminated stainless steel spoon. Samples were collected from the locations shown in the project specifications Plate C. These sample positions were located and staked during the initial survey of the site. Samples were labeled according to their location and depth. For example, SA-X.Y was collected at sample location X

and depth Y feet bgs. All confirmation soil samples were immediately placed on ice and transported to Savannah Laboratories under strict chain-of-custody. Ten percent of the confirmation soil samples were split. The split samples were labeled SA-10X.Y, where X is the sample location and Y is the depth of the sample in feet bgs. All split samples were sent to the USACE laboratory, located in Marietta, Georgia. The locations of the confirmation samples and split samples are shown on Figure 5. A discussion of all confirmation sample results is included later in the Confirmation Soil Samples section of this report. The results of split samples are discussed later in the Contractor Quality Control and Quality Assurance section of this report.

Soil Removal Activities in the AST Area

The FTP cover soils that were stockpiled onsite were removed first and transported to the SoilSafe facility. Then, beneath the area of the AST, 1 foot of soil was removed. After the soil was removed, confirmation samples SA-1.1 and SA-2.1 were collected from an interval 0 to 6 inches below the base of the excavation and soil samples SA-1.2 and SA-2.2 were collected from an interval 12 to 18 inches below the base of the excavation. The samples were immediately placed on ice and transported to Savannah Laboratories under strict chain-of-custody. Soil sample SA-2.1 was split, placed on ice and sent to the USACE laboratory for independent analysis for Quality Assurance purposes.

Excavation continued along the product piping trench. The product piping was removed prior to excavation activities by pulling it out of the ground. The product piping trench was excavated as per the specifications Drawings, Plate C-7. The excavation was 2 feet deep and 4 feet wide along the length of the trench. Soil samples SA-3.2, SA-4.2, SA-5.2, SA-6.2, SA-7.2 and SA-8.2 were collected from an interval 0 to 6 inches below the base of the excavation. Only one sample, SA-3.3, was collected from the 12 to 18 inch interval below the base of the excavation due to infiltrating groundwater in the base of the excavation. The confirmation soil sample locations are shown on Figure 5 and the analytical results are discussed later in the Confirmation Soil Samples section.

The AST area and the product piping trench were backfilled and compacted immediately upon completion of the excavation and confirmation soil sampling in

order to eliminate the hazard of an open excavation onsite and to alleviate the potential problems with compaction that groundwater infiltrating the base of the product piping trench would cause. After the AST area and piping trench was backfilled, it was tested for compaction using Sand Cone and One Point Compaction Test methods. The results of the compaction tests indicated the backfilled soils are between 96 and 97 percent compacted, well above the standard of 90 percent set by the project specifications. The laboratory reports of the compaction tests are included in Appendix F.

Soil Removal Activities in the FTP Area

Following completion of the soil removal/replacement at the AST area, the FTP area was excavated in accordance with the project specifications. The excavation depths in the FTP area were as follows:

- 4.5 feet bgs in the far eastern corner
- 3 feet bgs below the FTP (the FTP was 6 to 8 inches thick and the project specifications required removing 2.5 feet of soil below the base of the FTP)
- 2 feet bgs along the southern edge of the FTP area, and
- 1 foot bgs along the northern edge of the FTP area.

In addition, three monitor wells, MW-2, MW-5 and MW-7, were removed by pulling the casings and excavating around the boreholes. The excavations resulting from the removal of the monitor wells were filled with clean soil and compacted. The monitor wells were placed onsite during the 1995 USACE investigation of the site.

Soil samples SA-9.4.5, SA-10.4.5, SA-11.2, SA-12.2, SA-13.2, SA-14.2, SA-15.1, SA-16.1, SA-17.1, SA-18.2.5, SA-19.2.5, SA-20.2.5, SA-21.2 and SA-22.2.5 were collected from an interval 0 to 6 inches below the base of the excavation. Samples SA-9.5.5, SA-10.5.5, SA-11.3, SA-12.3, SA-13.3, SA-14.3, SA-15.2, SA-16.2, SA-17.2, SA-18.3.5, SA-19.3.5, SA-20.3.5, SA-21.3 and SA-22.3.5 were collected from the 12 to 18 inch interval below the base of the excavation. Please note that samples SA-19.2.5 and SA-19.3.5 were collected twice, once on October 30, 1997 and once on November 3, 1997. It was noted in the field that the location where these samples were collected on October 30, 1997

was incorrect. Consequently, the samples were recollected on November 3, 1997 in the correct location according to the project specifications. Both sets of samples were submitted to the analytical laboratory, thus there are two sets of laboratory data for samples SA-19.2.5 and SA-19.3.5.

The FTP area was backfilled and compacted immediately upon completion of excavation activities in order to eliminate the hazard of an open excavation onsite. After the FTP area was backfilled and compacted, it was tested for compaction using Sand Cone and One Point Compaction Test methods. The results of the compaction tests indicated the backfilled soils are between 95 and 99 percent compacted, well above the standard of 90 percent set by the project specifications. The laboratory reports of the compaction tests are included in Appendix F.

Soil Removal Activities in the Western Drainage Swale

The final portion of the site excavated was the drainage swale, located on the western portion of the work area. Prior to excavation activities in the swale, it was dewatered into a 20,000-gallon Baker Tank for temporary storage. Approximately 9,500 gallons of wastewater were generated and stored in the Baker Tank. The wastewater in the Baker Tank was predominantly water from the swale dewatering activity; however, approximately 50 gallons of decontamination water stored from pressure washing the FTP and the OWS were also included in the wastewater. The wastewater was sampled (WW-10) and submitted to Savannah Laboratories for analysis. Analytical results of the wastewater sample indicated an Oil and Grease concentration below reporting limits, a lead concentration of 0.0134 mg/l and a pH of 5.3. The sample results were submitted to Ms. Tressa Rutland of the Fort Stewart Directorate of Public Works, Environmental Department. Ms. Rutland approved the disposal of the wastewater at the Fort Stewart industrial wastewater treatment plant (IWWTP). The wastewater was transported and discharged to the Fort Stewart IWWTP by Turecamo Environmental Services, Inc.

After the swale was dewatered, it was determined that saturated soils existed 1 foot below the existing grade. After consultation with the USACE Savannah District Contract Officer Technical Representative, it was agreed that only one foot of soil/sediment would be excavated from the drainage swale in order not to

expose groundwater. Therefore, the swale was excavated to a depth of 1 foot below original grade. Soil samples SA-23.1, SA-24.1, SA-25.1, SA-26.1, SA-27.1, SA-28.1 and SA-29.1 were collected from an interval 0 to 6 inches below the base of the excavation. No samples were collected from 12 to 18 inches below the base of the excavation due to the presence of groundwater.

The swale was backfilled immediately in order to eliminate the hazard of an open excavation onsite. No compaction tests were performed on the backfill placed in the swale.

Composite Soil Samples for Disposal of Contaminated Soil

The total amount of soil removed from the site was 2,450 tons. In order to characterize the excavated soils, eight representative composite soil samples, labeled COM-10 through COM-17 were collected. Aliquots of soil for the composite samples were collected from the backhoe bucket as the soil was excavated from the site and placed in dump trucks. One aliquot of soil was collected from every 4 truckloads, and every 5 aliquots was composited for a sample. The composite samples were analyzed for TCLP Metals using EPA Method 6010/7000, for TCLP mercury using EPA Method 7470, for volatile organic compounds (VOCs) using EPA Method 8260, for polynuclear aromatic hydrocarbons (PAHs) using EPA Method 8100, for pesticides and polychlorinated biphenyls (PCBs) using EPA Method 8080, and for total petroleum hydrocarbons-gasoline range organics (TPH-GRO) and total petroleum hydrocarbons–diesel range organics (TPH-DRO) using EPA Method 8015-modified. After collection, the samples were immediately placed on ice and transported to the laboratory under strict chain-of-custody. The laboratory analytical report and the chain-of-custody documentation are included in Appendix D. Table 2 summarizes the laboratory analytical results of the composite soil samples. Sample results indicated reportable concentrations of TPH-GRO, TPH-DRO, PAHs, VOCs and pesticides. No reportable concentrations of TCLP metals, TCLP mercury or PCBs were detected.

Site Restoration

The site was restored by backfilling and grading to the initial topographic contours, except in the area of the AST where an earthen berm that had surrounded the AST was leveled. The soil was fertilized and seeded in accordance with the project specifications, and hay bales were placed in the swale in order to prevent erosion. Annual rye grass was used as a temporary grass to minimize erosion over the winter, and the permanent grass, lespedeza interstate, was spread and is expected to germinate in the spring. The materials used for site restoration are listed in Table 3, and a Final Grading Contours Map is presented in Figure 6.

■ Construction Quality Control

All materials and processes used for site construction met the required standards set by the project specifications. Table 3 summarizes the materials used at the site. In addition, CQC reports were completed daily, and Preparatory Phase meetings were held between the contractor and the USACE representative prior to each definable phase of work. The Preparatory Phase meetings were held in order for the contractor and the USACE representative to review the project specifications and agree that the process and materials defined by the project specifications were understood and accepted. Copies of the Preparatory Phase Meeting Checklists completed for this project are included in Appendix G, CQC Documentation.

In addition to the Preparatory Phase meetings, initial inspections and follow-up inspections were completed for all definable phases of work. These inspections are documented with the Initial Inspection Checklist and Follow-up Inspection Checklists, also included in Appendix G, CQC Documentation.

■ Confirmation Soil Sample Results

Sampling activities at the FTP consisted of sampling waste solids, liquids and debris for waste characterization. The sampling frequency and analytical results were discussed in each respective section of this report. Additionally, soils remaining in the excavations were sampled to assess the final conditions of the site. This section

discusses the confirmation sampling and analyses from the soils at the base of the excavation that remain onsite.

Confirmation soil samples were collected using a decontaminated stainless steel hand auger from borings installed at the following 29 locations: 7 locations beneath the western swale, 15 locations beneath the FTP area and 7 locations beneath the AST area and product piping. The locations of the confirmation soil samples collected during the IM are shown in Figure 5. At many of the locations, two soil samples were collected from each boring at depths of 0 to 6 inches and 12 to 18 inches below the base of the excavation. However, at sample locations SA-4, SA-5, SA-6, SA-7, SA-8, SA-23, SA-24, SA-25, SA-26, SA-27, SA-28 and SA-29, confirmation soil samples were not collected from the 12 to 18 inch bgs interval due to the shallow groundwater table. Analysis of the confirmation samples included TPH-GRO and TPH-DRO using EPA Method 8015-modified, PAHs using EPA Method 8100, VOCs using EPA Method 8260, RCRA metals (arsenic, barium, cadmium, chromium, lead, selenium and silver) using EPA Method 6010, and mercury using EPA Method 7471.

The laboratory analytical results of all of the confirmation soil samples are summarized in Table 4 and on Figure 7, and a copy of the laboratory analytical report is included in Appendix D. Please note that sample results for soil samples SA-19.2.5 and SA-19.3.5 are reported on laboratory analytical report numbers S7-76157 and S7-76224. This is due to a mistake in the sample locations as described earlier in the Confirmation Soil Sampling section of this report. Report number S7-76224 contains the analytical results for samples SA-19.2.5 and SA-19.3.5 that were collected from the correct sample location.

The analytical results indicate that extremely isolated occurrences of petroleum-related PAH contaminant concentrations in the native soils remaining onsite are above the PCTs (Samples SA-23.1, SA-24.1, SA25.1, and SA-26.1). The analytical results also indicate a more consistent pattern of exceedance of PCT for arsenic.

Arsenic was detected above the carcinogenic PCT (0.4 mg/kg), in a majority of the confirmation samples collected from the site (Samples SA-2.2, SA-3.2, SA-3.3, SA-4.2, SA-4.3, SA-5.2, SA-6.2, SA-7.2, SA-8.2, SA-9.4.5, SA-10.4.5, SA-10.5.5, SA-11.2, SA-11.3, SA-12.2, SA-12.3, SA-13.2, SA-13.3, SA-14.2, SA-14.3, SA-17.2,

SA-18.2.5, SA-18.3.5, SA-19.2.5, SA-19.3.5, SA-20.2.5, SA-20.3.5, SA-21.2, SA-21.3, SA-23.1, SA-24.1, SA-25.1, SA-26.1, SA-27.1, SA-28.1, and SA-29.1). Laboratory analytical results for arsenic ranged from below reporting limits of 1.0 milligrams-per-kilogram (mg/kg), wet weight, to 10.4 milligrams-per-kilogram (mg/kg), which is above the PCT for carcinogenic exposure and is below the PCT for systemic exposure, which is 80 mg/kg. Based on the widespread distribution and consistent concentrations of arsenic in soil samples, it is likely that arsenic is naturally occurring, and not resultant from past site activities.

In the western drainage swale, benzo (a) pyrene, and benzo (b,k) fluoranthene were detected above their respective carcinogenic PCTs, which are 0.12 mg/kg and 1.2 mg/kg, respectively. Benzo (a) pyrene was detected at 3.7 mg/kg in sample SA-25.1 and at 1.2 mg/kg in sample SA-26.1. Benzo (b,k) fluoranthene was detected at 8.2 mg/kg in sample SA-25.1. Both SA-25.1 and SA-26.1 are located in the central portion of the swale, as shown in Figures 5 and 7.

■ Chemical Quality Assurance/Quality Control

Chemical quality assurance (QA) and quality control (QC) was achieved during the Fort Stewart IM project by properly decontaminating sampling equipment, using precautions to prevent cross-contamination of samples, and collecting QA and QC samples. The QA samples for the Fort Stewart IM were split samples sent to and analyzed by the USACE laboratory. The QC samples for the Fort Stewart IM included trip blanks and rinseate blanks.

The precautions used to prevent cross-contamination of confirmation samples included using decontaminated stainless steel sampling equipment, decontaminated glass bowls, dedicated Nitrile sampling gloves, and dedicated plastic sheeting to lay down equipment and sampling containers. Care was taken during sampling not to allow sampling equipment or containers to touch the ground or clothing. Sample containers were closed until media (soil) was placed into the container, and the containers were closed immediately after they were filled.

Sampling equipment was decontaminated prior to sample collection for each composite soil and confirmation sample. The following procedure was used to

decontaminate all sampling equipment, including stainless steel spoons, glass bowls and the stainless steel hand auger:

- Sampling equipment was brushed in a solution of Alconox and water to remove all visible particles and film.
- Sampling equipment was rinsed thoroughly with tap water.
- Sampling equipment was rinsed thoroughly with analyte-free deionized water.
- Sampling equipment was rinsed thoroughly with pesticide-grade isopropyl alcohol.
- Sampling equipment was allowed to completely air dry prior to sample collection.

Sampling equipment removed from the decontamination area was covered with plastic. All sampling equipment that was stored overnight was covered with aluminum foil and wrapped in plastic.

Following each day of the confirmation sampling activities, a decontaminated sampling spoon was wrapped in aluminum foil and plastic and saved for a rinseate analysis. Three decontaminated spoons were sent to Savannah Laboratories, where Savannah Laboratories personnel collected rinseate samples from the spoons.

The rinseate blank for organic analyses was collected by pouring organic-free deionized water over the sampling equipment and collecting the water in the laboratory-supplied, laboratory-cleaned containers that correspond to the respective analyses: 40-milliliter glass vials for VOCs and 1-liter amber glass containers for TPH-GRO and TPH-DRO. The rinse blank for inorganic analyses was collected in the same method, using deionized water. The container that was used for the RCRA Metals analysis was a 1-liter pre-preserved plastic container. The rinseate blanks were analyzed for the following:

- VOCs using EPA Method 8260
- RCRA Metals using EPA Method 6010/7000/200
- TPH-GRO and TPH-DRO by EPA Method 8015-modified, and
- PAHs using EPA Method 8100

In addition, a trip blank was submitted for each cooler of confirmation samples submitted to the laboratory. Trip blanks were organic free water in 40-milliliter glass vials provided by the laboratory. The trip blank samples were sent by the laboratory with the empty sample containers and remained with the sample containers until they were submitted with samples to the laboratory. The trip blanks were analyzed for VOCs using EPA Method 8260. A total of 6 trip blanks were submitted.

Concentrations of all constituents analyzed in the field QC samples were below the method reporting limits. These results confirm that there were no detected outside interferences from any contaminants remaining on the sampling equipment or from the samples being exposed to contaminants during sample transport.

Quality assurance samples collected for the Fort Stewart IM project included split samples which were submitted to the USACE laboratory. A total of 6 split samples were collected and submitted. Split samples were collected to evaluate the precision and reproducibility of the confirmation sample analytical results from Savannah Laboratories. Consequently, split samples were analyzed for the same parameters as the confirmation samples. A quality assurance review of the split samples will be conducted by the USACE.

Savannah Laboratories analyzed method blanks, laboratory standards, and all samples for surrogate analytes in accordance with the laboratory's internal quality control practices. QC data was generated for all samples submitted to the laboratory. The laboratory analytical reports include the laboratory QC data and were reviewed for data quality. The analytical results of all surrogate recoveries and laboratory standards were within QC limits. In addition, no analytes were detected in any of the method blanks. As a result, all of the analytical data generated by Savannah Laboratories was accepted (no R-flagged data) and the completion percentage for the project is 100 percent.

■ Conclusion

The intent of the IM was to remove and properly dispose of the following: an AST and mock aircraft with associated foundations and piping; the concrete FTP and cover soils; a concrete OWS sump and appurtenances; and, soil and sediments onsite which exceed the PCTs established in the project specifications.

The AST, mock aircraft, piping, FTP, OWS, soil and sediments were removed from the site in accordance with the project specifications. One foot of sediment was removed from the western drainage swale due to the shallow groundwater table.

The analytical results of the confirmation soil samples indicated that concentrations of analytes in some of the native soils remaining onsite are above PCTs. Laboratory analytical results for arsenic ranged from below reporting limits of 1.0 mg/kg, wet weight, to 10.4 mg/kg. These results exceed the PCT for carcinogenic exposure (0.4 mg/kg), but are below the PCT for systemic exposure (80 mg/kg) (Samples SA-2.2, SA-3.2, SA-3.3, SA-4.2, SA-4.3, SA-5.2, SA-6.2, SA-7.2, SA-8.2, SA-9.4.5, SA-10.4.5, SA-10.5.5, SA-11.2, SA-11.3, SA-12.2, SA-12.3, SA-13.2, SA-13.3, SA-14.2, SA-14.3, SA-17.2, SA-18.2.5, SA-18.3.5, SA-19.2.5, SA-19.3.5, SA-20.2.5, SA-20.3.5, SA-21.2, SA-21.3, SA-23.1, SA-24.1, SA-25.1, SA-26.1, SA-27.1, SA-28.1, and SA-29.1). Based on the widespread distribution and consistent low concentrations of arsenic in the native soils, it is likely that the arsenic is naturally occurring and not a result of past site activities. In the western drainage swale, sediments remain that contain benzo (a) pyrene and benzo (b,k) fluoranthene above their respective PCTs (Samples SA-23.1, SA-24.1, SA25.1, and SA-26.1).

CONSTRUCTION QUALITY CONTROL REPORT

Date: 10 15 97 Report No. 1

Contract No.: DACA21-97-C-0023

Description and Location of Work: Mobilization - Site Prep Fire Traing Pit

WEATHER: (Clear) (P. Cloudy) (Cloudy); Temperature: 61 Min, 75 Max;
Rainfall 2 Inches

Contractor/Subcontractors and Area of Responsibility
a. EHPE Environmental - Fire Training Pit - Task 1 Site prep
b.
c.
d.
e.
f.
g.
h.

1. Work Performed Today:

(Indicate location and description of work performed. Refer to work performed by prime and/or subcontractors by letter in table above.)

Fire Training Pit - Mobilize Cajpe to site - Familiarization

2. Results of Control Activities:

(Indicate whether: P-Preparatory, I-Initial, or F-Followup and include satisfactory work completed or deficiencies with action to be taken.)

Preparatory - Silt Fence Install will Be 10 16 97

3. Test Required by Plans and/or Specifications Performed and Results of Tests:

No test today -

4. Monitoring of Materials and Equipment:
Support Vehicle - F150 Ford
1401 - Vac Truck - All Relavant Materials + Equipment are Stored here

5. Offsite Surveillance Activities:
Cape employees - Retrive Supplies - I.E 10 - 55 gal Drums
6 - Rolls 6 mill plastic
Sign - U.S.A.C.O.E - made up - contractor sign

6. Job Safety: Tool Box meeting held - Site Dress code addressed

(Daily comment required.)

7. Remarks: Q.C. meeting with Fred Gotthart + Dave Fortune

a. (Cover any conflicts in plans, specifications or instructions.)

b. (Action taken in review of submittal.)

c. (Verbal instructions received.)

Inspector

CONTRACTOR'S VERIFICATION:

The above report is complete and correct and all material and equipment used and work performed during this reporting period are in compliance with the contract plans and specifications except as noted above.

CONSTRUCTION QUALITY CONTROL REPORT

Date: 10/16/97 Report No. 2

Contract No.: DACA21-97-C-0023

Description and Location of Work: Fort Stewart Fire-Training Pit, Ft Stewart, GA

WEATHER: (Clear) (P. Cloudy) (Cloudy); Temperature: 58 Min, 68 Max;
Rainfall ___ Inches

Contractor/Subcontractors and Area of Responsibility
a. CAPE Environmental – Site Safety and Health Training
b. CAPE Environmental – Preparatory Phase Meeting
c. CAPE Environmental – Install Silt Fence
d.
e.
f.
g.
h.

1. Work Performed Today:

(Indicate location and description of work performed. Refer to work performed by prime and/or subcontractors by letter in table above.)
A&B Meetings held at Area office for USACE on Post at Fort Stewart. Meeting A Covered site-specific Health and Safety issues in general. Meeting B covered installing silt fence and collecting composite samples for soil characterization.
C – Installed 200 feet of silt fence, mobilized support trailer onsite.

2. Results of Control Activities:

(Indicate whether: P-Preparatory, I-Initial, or F-Followup and include satisfactory work completed or deficiencies with action to be taken.)

3. Test Required by Plans and/or Specifications Performed and Results of Tests:

None for Silt Fence Installation

4. Monitoring of Materials and Equipment:

Also, see attached air monitoring res

Inspected Trenching machine for operation and leaks.

5. Offsite Surveillance Activities:

None

6. Job Safety:

(Daily comment required.)

One worker noted wearing hardhat backward. Worker Corrected. Inspected First Aid kit and Fire Extinguishers. Decision made to replace - FirstAid kit and one fire extinguisher low on charge, fire extinguisher to be charged on 10/17/97.

7. Remarks:

a. (Cover any conflicts in plans, specifications or instructions.)

b. (Action taken in review of submittal.)

c. (Verbal instructions received.)

Inspector

CONTRACTOR'S VERIFICATION:

The above report is complete and correct and all material and equipment used and work performed during this reporting period are in compliance with the contract plans and specifications except as noted above.

CONSTRUCTION QUALITY CONTROL REPORT

Date: Oct 17 1997 Report No. 3

Contract No.: DACA21-97-C-0023

Description and Location of Work: Site prep Fire training pit

WEATHER: (Clear) (P. Cloudy) (Cloudy); Temperature: 62 Min, 70 Max;
Rainfall 0 Inches

Contractor/Subcontractors and Area of Responsibility
a. Cape Environmental - Ecology Services Site prep
b.
c.
d.
e.
f.
g.
h.

1. Work Performed Today:

(Indicate location and description of work performed. Refer to work performed by prime and/or subcontractors by letter in table above.)

Trench around perimitar - Construction Zone - Install Silt Fence

2. Results of Control Activities:

(Indicate whether: P-Preparatory, I-Initial, or F-Followup and include satisfactory work completed or deficiencies with action to be taken.)

Preparatory was held - work not completed

3. Test Required by Plans and/or Specifications Performed and Results of Tests:

No test Required per spec

4. Monitoring of Materials and Equipment:

Silt Fence - Buried 6" Dig 12" 6" Trencher - Rung wall - Air + noise monitoring Completed

5. Offsite Surveillance Activities:

International Safety Sign - Is working on Hard Hat Area + no unauthorized Entry Signs.

~~Activities~~ Site WORK Done - By Capa - Install Silt Fence

6. Job Safety: Every one Stayed away From trenchor Blades.

(Daily comment required.)

Every one within 10' Ft of trencher, has to wear EAR protection.

7. Remarks:

a. (Cover any conflicts in plans, specifications or instructions.)
VERY CLEAR SCOPE OF WORK.

b. (Action taken in review of submittal.)

c. (Verbal instructions received.)

Install Silt Fence per Specifications.
Preparatory complete

Inspector

CONTRACTOR'S VERIFICATION:

CONSTRUCTION QUALITY CONTROL REPORT

Date: 12/20/97 Report No. 5

Contract No.: DACA21-97-C-

Description and Location of Work: Fire Training Pit FST-013, Fort Stewart Georgia

WEATHER: (Clear) (P. Cloudy) (Cloudy); Temperature: 60 Min, 73 Max;
Rainfall ∅ Inches

Contractor/Subcontractors and Area of Responsibility

a. Preparatory Phase Meeting for Clearing and Grubbing, AST + Mock Aircraft Removal and Demolition.
b. Cleaned AST and Mock Aircraft.
c. Removed soil from atop Fire Training Pad.
d. Constructed Decon Pad.
e. Finished Silt Fence.
f.
g.
h.

1. Work Performed Today:

(Indicate location and description of work performed. Refer to work performed by prime and/or subcontractors by letter in table above.)

CAPE Environmental - a, b, c, d, e.

2. Results of Control Activities:

(Indicate whether: P-Preparatory, I-Initial, or F-Followup and include satisfactory work completed or deficiencies with action to be taken.)

P- Communicated and understood Work required by Specs and Workplan for AST + Mock Aircraft Removal, Demolition, and Clearing + Grubbing.
I- Clearing + Grubbing - Equipment and materials checked, Silt Fence constructed per detail on Detail Sheet.

3. Test Required by Plans and/or Specifications Performed and Results of Tests: Air monitoring in breathing zone during AST Cleaning, Explosimeter monitoring inside AST during cleaning. LEL = 3, O_2 = 20.8 Typically OVA = 3.5 or less.
OVA monitoring during soil removal - OVA = < 1 ppm.

4. Monitoring of Materials and Equipment: Silt Fence and Stakes - OK. Trencher - Sleeve? pin, pin replaced. Uni loader - ok. Vac Truck (1401) OK - Hearing protection zone at 20 feet within area of Vacuum.

5. Offsite Surveillance Activities:
Signs for site &

6. Job Safety: Chuck fell over silt fence, Wore hearing protection (Daily comment required.) within 20 feet of Vac truck, ~~ATP~~ Volatile organics concentrations in breathing zone within acceptable limits - see attached monitoring.

7. Remarks: Making sure site is kept safe using instrumentation
   a. (Cover any conflicts in plans, specifications or instructions.)
   b. (Action taken in review of submittal.) and being aware of physical hazards.
   c. (Verbal instructions received.)

Inspector

CONSTRUCTION QUALITY CONTROL REPORT

Date: 10/22/97 Report No. 6

Contract No.: DACA21-97-C-0023

Description and Location of Work: Fort Stewart, GA Fire Training Pit FST-013

WEATHER: (Clear) (P. Cloudy) (Cloudy); Temperature: 50 Min, 70 Max;
Rainfall Ø Inches

Contractor/Subcontractors and Area of Responsibility
a. CAPE - Grubbing
b. CAPE - Remove AST, cut holes in tank
c. CAPE - Clear soil off Fire Training Pad (FTP)
d. CAPE - Clean FTP
e. CAPE - Sample FTP for disposal.
f. CAPE - Break up FTP
g.
h.

1. Work Performed Today:

(Indicate location and description of work performed. Refer to work performed by prime and/or subcontractors by letter in table above.)

Fort Stewart Fire Training Pit FST-013 - CAPE - a, b, c, d, e & f.

2. Results of Control Activities:

(Indicate whether: P-Preparatory, I-Initial, or F-Followup and include satisfactory work completed or deficiencies with action to be taken.)

None today - Preparatory and Initial inspections done on 10/20/97

3. Test Required by Plans and/or Specifications Performed and Results of Tests:
LEL meter used during cutting of tank. Combustible vapors stayed less than 10% during operation.

Core samples of concrete collected - results due 12/27 for TCLP

4. Monitoring of Materials and Equipment: Checked Trackhoe, See attached equipment Checklist. Checked Saw used to cut tank. Saw OK

5. Offsite Surveillance Activities: ~~None~~ Had company come look at taking trees offsite.

6. Job Safety: Air monitoring results attached. Reminded (Daily comment required.) everyone not to smoke w/in construction limits, wore hearing protection during break-up of concrete and sawing tank. Wore gloves & long sleave shirts during cutting tank. Grubbed trees were removed so that trees fell away from trackhoe.

7. Remarks:

   a. (Cover any conflicts in plans, specifications or instructions.)

   b. (Action taken in review of submittal.)

   c. (Verbal instructions received.)

CONSTRUCTION QUALITY CONTROL REPORT

Date: 10/23/97 Report No. 8

Contract No.: DACA21-97-C-0023

Description and Location of Work: Fort Stewart, GA Fire Training Pit FST-013

WEATHER: (Clear) (P. Cloudy) (Cloudy); Temperature: 50 Min, 75 Max; Rainfall 0 Inches

Contractor/Subcontractors and Area of Responsibility

a. Remove/Demo Oil/Water Separator
b. Sample Liquid Waste
c. Sample concrete
d. Grubbing
e.
f.
g.
h.

1. Work Performed Today:

(Indicate location and description of work performed. Refer to work performed by prime and/or subcontractors by letter in table above.)

CAPE - a, b, c, d

2. Results of Control Activities:

(Indicate whether: P-Preparatory, I-Initial, or F-Followup and include satisfactory work completed or deficiencies with action to be taken.)

None today

3. Test Required by Plans and/or Specifications Performed and Results of Tests:

Collect samples of concrete, UST liquid waste, OWS liquid waste, wastewater for disposal characteristics.

4. Monitoring of Materials and Equipment:
Checked Chainsaw, lubricated and checked trackhoe.

5. Offsite Surveillance Activities:
Staked out borrow area. Surveying of borrow area will be done next week.

6. Job Safety: Air monitoring results attached.
(Daily comment required.) Chainsaw Safety reviewed. No accidents with chainsaw - proper PPE worn (safety glasses, hard hat, gloves, steeltoed boots). Proper PPE worn for liquid sampling - Saranex coated tyvek, nitrile gloves, rubber boots.

7. Remarks:

a. (Cover any conflicts in plans, specifications or instructions.)

b. (Action taken in review of submittal.)

c. (Verbal instructions received.)
Mr. Gotthardt asked that CAPE stake out borrow area.

Inspector

CONTRACTOR'S VERIFICATION:

CONSTRUCTION QUALITY CONTROL REPORT

Date: 10/28/97 Report No. 11

Contract No.: DACA21-97-C-0023

Description and Location of Work: Fort Stewart Fire Training Pit FST-013

WEATHER: (Clear) (P. Cloudy) (Cloudy); Temperature: 40 Min, 68 Max;
Rainfall ___ Inches

Contractor/Subcontractors and Area of Responsibility
a. Clearing Graphed trees
b. Disposing Concrete
c. Preparatory Phase meeting
d.
e.
f.
g.
h.

1. Work Performed Today:

(Indicate location and description of work performed. Refer to work performed by prime and/or subcontractors by letter in table above.)

CAPE - a, b, c

2. Results of Control Activities:

(Indicate whether: P-Preparatory, I-Initial, or F-Followup and include satisfactory work completed or deficiencies with action to be taken.)
Preparatory: Excavation and Disposal of Soil, Backfilling - Satisfactory, still need borrow pit survey.
Field Testing and Sampling - Satisfactory
Removal of Drums - Satisfactory

3. Test Required by Plans and/or Specifications Performed and Results of Tests: Concrete Samples CC-1, CC-2 and CC-3 all Clean, results attached
Composite Soil Samples Com-1 and Com-2 Clean, results attached

4. Monitoring of Materials and Equipment: Check out lube truckhoe. Checked each truck (hauler) for safety and containment.

5. Offsite Surveillance Activities: Coordinated Sampling Analysis with Savannah Labs. Note: Spoke with Randy Jones at DPW on Friday 10/25/97 regarding manifests. He signed all the manifests and does not have to be onsite to ensure proper hauling and manifesting. Also Tressa Rutland, who will be ~~banding~~ coordinating our wastewater removal asked that we analyze our wastewaters for phenols.

6. Job Safety: (Daily comment required.) We discussed proper use of wood chipper, no loose clothes, do not get tangled up into limbs and allow Chipper to pull you in. Truck drivers stayed in trucks while being loaded. No personnel walking around or near truckhoe. Air monitoring results ~~included~~ attached. Air monitoring results attached.

7. Remarks:

a. (Cover any conflicts in plans, specifications or instructions.)

b. (Action taken in review of submittal.)

c. (Verbal instructions received.)

Mr. Gotthardt asked CAPE to get Tressa Rutland to clarify with him the sampling of wastewater for phenols. She needs to give him a directive if that is a requirement for disposal. Phenols analysis was not in the Specs and, therefore, is not in the Scope of work.

LOG NO	SAMPLE DESCRIPTION , QC REPORT FOR LIQUID SAMPLES
76030A-5	Method Blank
76030A-6	Lab Control Standard % Recovery

PARAMETER	76030A-5	76030A-6

Methods: EPA SW-846 and 40 CFR Part 136.

X = Identification of target analytes using GC methodology is based on retention time. Although two dissimilar GC columns confirmed the presence of the target analyte in the sample, % difference is >25%. Thus, reviewer discretion should be employed during data review and interpretation of results for this target compound.

*F33 = Control limits are established only for surrogate concentration levels specified by EPA methods. Because the sample was diluted prior to analysis, surrogate recoveries are not reported.

*F65 = Elevated detection limits were reported due to sample matrix interference which required sample or extract dilution.

Michael J. Salum, Project Manager

REPORT OF RESULTS

LOG NO SAMPLE DESCRIPTION , QC REPORT FOR LIQUID SAMPLES

PARAMETER

Methods: EPA SW-846

*F33 = Control limits are established only for surrogate concentration levels specified by EPA methods. Because the sample was diluted prior to analysis, surrogate recoveries are not reported.

*F36 = Surrogate recovery was outside established limits due to coeluting matrix interference in the sample.

*F65 = Elevated detection limits were reported due to sample matrix interference which required sample or extract dilution.

Michael J. Salum, Project Manager

76157-28	TCLP Extraction Fluid Blank

PARAMETER	76157-28

Methods: EPA SW-846

*F33 = Control limits are established only for surrogate concentration levels specified by EPA methods. Because the sample was diluted prior to analysis, surrogate recoveries are not reported.

*F35 = Due to the analyte abundance, target compound concentrations are reported from multiple runs to achieve requested detection limits.

Michael J. Salum, Project Manager

X = Identification of target analytes using GC methodology is based on retention time. Although two dissimilar GC columns confirmed the presence of the target analyte in the sample, % difference is >25%. Thus, reviewer discretion should be employed during data review and interpretation of results for this target compound.

Methods: EPA SW-846
*F43 = The hydrocarbon pattern in the sample chromatogram did not correspond to patterns of the laboratory's reference standard patterns.

JOB NUMBER: 0161S

SOIL SAFE TECHNOLOGIES

GENERAL INSTRUCTIONS FOR COMPLETING MATERIAL CHARACTERIZATION REPORT (MCR)

The MCR has been designed to provide Soil Safe Technologies with the information necessary to treat your material in a safe, legal and environmentally compatible manner.

The information on Form SSTI-MCR2P is required prior to the acceptance of any materials at any of our facilities. Answers must be provided for all questions/sections on this form. Responses must be legibly printed in either blue or black ink, or typed.

If a particular question is not applicable to your material, indicate by writing "N/A" in the appropriate space. If your material does not contain a particular constituent, indicate by writing "None" in the appropriate space.

If you do not know the answer to a specific question, indicate by writing "Unknown" in the appropriate section. This response may require you to provide additional information, or perform additional analysis.

If you are acting as the agent for the generator, the generator must either fill out and sign the "Delegation of Authority" section of this document, or provide you with a letter authorizing you to act as his/her agent with regards to any actions or communications regarding Soil Safe. A copy of the letter will be submitted with this form.

Results of the parameters analyzed must be within Soil Safe's acceptance limits as defined on Form SSTI-MCR3P. Please note the exceptions for Georgia Regulated Underground Storage Tanks. Attach any on-hand analyticals to this form when submitting.

Form SSTI-MCR4P must be reviewed and signed to certify the non-hazardous nature of the material to be received.

Soil Safe Technologies will review the analytical results and completed MCR. A site audit may be performed to confirm the information submitted, If the material meets acceptance limits, the site will be issued an approval number. The approval number must appear on all correspondance relating or referring to that particular site (i.e. manifests, MCR, proposal, etc.).

If you need assistance in completing this form, please contact your Soil Safe representative at (912) 925-6800.

Make a copy of this form for your records and fax to (912) 925-0308 or send the original and all attachments to Soil Safe Technologies, Incorporated, P.O. Box 60055, Savannah, Georgia 31420.

SOIL SAFE TECHNOLOGIES

I, the undersigned, verify to the best of my knowledge, that the waste material submitted for acceptance at SOIL SAFE TECHNOLOGIES contains no contaminants other than those for which it has been tested

1. Generator Information: Fort Stewart
   Generator: U.S. Army ~~Corps of Engineers~~
   Site: DACA21-97-~~R-0014~~ C-0023 DX
   Address: Fire Training Area
   Fort Stewart, GA
   Facility or Tank(s) ID (If applicable): ~~None~~ Fire Training Pit FST-013

2. Customer Information:

   Name: Cape Environmental
   Address: 2302 Parklake Dr. Ste 200
   Atlanta, GA 30345-2907

3. Name, Title and Telephone Number of Person Completing this Form:

   David L. Fortune, Project Manager, CAPE, 770 908 7200

4. Affiliation of Person Named in Item 3 (Circle):

   Customer Generator Other (Specify): Contractor

5. Type of Facility Generating Contaminated Soil: Dept. of Defense base

   Source (Circle Applicable): Regulated UST Nonreg UST (AST) Overfill (Spill) Unknown

   Other (Specify): _____

6. Anticipated Volume: **2,600** Tons

7. Soil Contaminant(s) (Circle): (Gasoline) Fuel Oil (#____) (Diesel) (Jet Fuel) Waste Oil

   Other (Including Unknown) (Specify): Possibly Paint Solvents (Acetone)

   Note: Unknown or non-verifiable contaminants may result in increased or additional pre-acceptance analytical requirements.

8. Soil Characteristics and Constituents by Percentage (Must equal 100%):

   Sand 80 % Dirt ____ % Gravel ____ % Lg. Gravel ____ % Clay 20 % Rocks ____ %

   Other (Describe): _____

SOIL SAFE TECHNOLOGIES

NON-HAZARDOUS MATERIAL APPROVAL PROCEDURES

Generator/Customer provided analyticals must be performed by an approved laboratory using methods in conformity with Test Methods for Evaluating Solid Waste (United States Environmental Protection Agency, Office of Solid Waste and Emergency Response, SW-846, Third Edition, as revised) or with an alternate method approved by Georgia Environmental Protection Division. Soil Safe Technologies may, based on circumstances, perform a site audit and collect a composite sample(s). Each sample will be assigned a sample number. This number will be used to identify the generator and the location of the contaminated soil. The sample number will also be used as the basis for the Approval number (or the Rejection number), by adding the prefix A (or R) to the sample number. If the situation so dictates (e.g. soil accepted/approved based upon customer provided analyticals) samples will be collected from incoming vehicles and used as described above. **Misrepresented material containing any levels of contamination in excess of Soil Safe's acceptance criteria, or any type of hazardous or coded waste will be disposed in a legal and appropriate manner at the cost of the generator (or his/her agent).**

One of the samples submitted will be used as a comparative sample against incoming material. This sample will be retained for ninety (90) days after the material has been processed. The second sample will be used for back up analysis by Soil Safe's laboratory.

The acceptance parameters for incoming material to any Soil Safe Technologies receiving location are listed below. Signatures on Form SSTI-MCR2P and Form SSTI-MCR4P constitute a written warranty that the material being offered for recycle is within those parameters listed.

Parameter Test	Acceptance Criteria
1. Ignitability (Flash Point)	Greater than 140 °F / 60°C
2. Corrosivity (pH)	Greater than 2 and less than 12.5
3. TPH (8015M GRO or acceptable equivalent)	Less than 25,000 ppm
4. TPH (8015M DRO or acceptable equivalent)	Less than 25,000 ppm
5. TCLP (Target Metals) (1311)	Less than EPA limits (40 CFR Part 261.24)
6. PCBs Screen	Less than 1 ppm
7. BTEX	Less than 1700 ppm
8. Moisture Content	Less than 25% moisture
9. TOH or TOX (Waste Oil Impacted Only)	Less than 1000 ppm (Waste Oil Impacted Only)
10. TPH (418.1) (Waste Oil Impacted Only)	Less than 25,000 ppm

NOTE: Other tests may be required depending on type and source of contamination. Soil generated as the result of a spill or from an unverifiable source require a full TCLP List.

Petroleum contaminated soil that is generated in association with **regulated underground storage tanks** as defined by the Georgia Environmental Protection Division, Georgia Underground Storage Tank (GUST) Rule 391-3-15-.02 are exempted from the testing requirements of 40 CFR Part 261.24. Soil Safe will accept soils based on the analytical requirements for site closure activities, providing documented evidence is presented that confirms the site falls within the rules.

The analytical results will be reviewed by an authorized representative of Soil Safe Technologies. If approved for recycle at the facility, an Approval Number must be on the incoming manifest or the shipment will be rejected at the facility. The Approval Number will be used in the SSTI Inventory Tracking System.

SOIL SAFE TECHNOLOGIES

I. PCB CERTIFICATION

I, the undersigned, to the best of my knowledge verify that the waste material submitted for acceptance to Soil Safe Technologies does not contain Polychlorinated Biphenyls (PCBs), as defined by EPA 40 CFR 761, at a level greater than 1 ppm.

II. HERBICIDE/PESTICIDE CERTIFICATION

I, the undersigned, to the best of my knowledge verify that the waste material submitted for acceptance to Soil Safe Technologies does not contain herbicides or pesticides at a concentration which would render it as hazardous as defined by EPA CFR 761.

III. RCRA TOXICITY CERTIFICATION

I, the undersigned, to the best of my knowledge verify that the waste material submitted for acceptance to Soil Safe Technologies does not contain TCLP or priority contaminants which characterize the waste material as defined by EPA 40 CFR 761.

IV. NON-HAZARDOUS WASTE CERTIFICATION

I, the undersigned, to the best of my knowledge verify that the waste material submitted for acceptance to Soil Safe Technologies is not an EPA listed hazardous waste, and does not exhibit any of the characteristics of a hazardous waste. This waste material is therefore classified non-hazardous as defined in EPA 40 CFR 261.

V. UNDERGROUND STORAGE TANK CERTIFICATION

I, the undersigned, to the best of my knowledge verify that the waste material submitted for acceptance to Soil Safe Technologies is generated as a result of action taken under the Federal Underground Storage Tank Regulation 40 CFR 280.

SOIL SAFE TECHNOLOGIES

The following information is required prior to acceptance of material at Soil Safe Technologies. The information must be complete and is required by our accounting department for billing purposes. The following information will be held in strict confidence.

CHAIN OF PAYMENT

Instructions For This Section : In order, starting with the generator and ending with Soil SafeTechnologies, please provide the chain of payment for the project you wish to have approved for acceptance by Soil Safe Technologies. This information must be provided. Please contact your Soil Safe representative with any questions that you may have.

1. **U.S. Army Corps of Engineers** Fire Training Area Fort Stewart, GA

Name, address, contact name and phone number of broker, consultant, contractor, General Contractor, etc.

2. CAPE- Environmental Management, Jan Stanley for ~~Terry Moore~~, 770 908-7200

3. _____

4. _____

5. _____

(If additional space is needed, please provide requested information on seperate sheet and attach)

I, the undersigned, verify the information provided above is true and accurate. The information is complete and follows the chain of payment as it will occur upon invoice for this project. Any changes to this chain will be reported to Soil Safe Technologies as soon as possible.

Authorized Signature | Title: Fld. Supt. | Date: 10-29-97

GENERATOR DELEGATION OF AUTHORITY STATEMENT

I, the undersigned, fully authorize the following Company(ies) and/or the following individuals to act in my behalf with any and all matters concerning the disposition of the material(s) described within this document; to include (but not limited to) matters of environmental compliance, scheduling, transportation, acceptance of prices and proposals, signing of documents required to accept, transport and process material, and any other activities deemed routine and necessary to complete this project. My signature on this document certifies that I am the owner/generator of the material(s) in question or in the case of a corporation or other type of company affiliation I am currently authorized to act in their behalf.

Company: Authorized Individuals:

Name (type or print): RANDY JONES | Signature: Randy Jones | Title: Environ. Prot. Spec. | Date: 10-29-97

Soil Safe Technologies, Incorporated

Certificate of Recycle

Soil Safe Technologies Incorporated accepted 2449.59 tons of non-hazardous recyclable petroleum contaminated soil generated by the U.S. Army, Fort Stewart, Georgia from the Fire Training Area, contract number DACA21-97-C-0023 under SSTI approval number 4-0161.

This material was contracted by and between Soil Safe Technologies, Incorporated and Cape Environmental, contractor, representing the generator. It was accepted for recycling based upon analytical information provided by a certified laboratory and also written certification by the generator verifying it's non-hazardous status.

This material was transported under manifest numbers 0161S-001 through 0161S-159. (Manifest number 0161S-154 was not used.)

Soil Safe Technologies, Incorporated accepts full responsibility for this material to include it's safe handling, storage and processing. We certify that this material has been recycled into an environmentally benign product for paving or other construction purposes.

Paul M. Lewczyk
Director of Operations

Report No. 10/30/97-2
Client: Cape Environmental Management, Inc.
Job: Fire Training Pit
Ft. Stewart, GA
Project #8701-A00

Attached are the results of the classification and moisture-density tests performed on (1) sample of proposed fill material submitted on October 23, 1997.

If you have any questions, please call.

Respectfully submitted,

WHITAKER LABORATORY, INC.

Joseph F. Whitaker

SAFETY CHECKLIST FOR MOBILE CONSTRUCTION EQUIPMENT
GENERAL REQUIREMENTS SECTION

equipment name and number: Case 1845 C #2	
contractor: CAPE Environmental Management	contract#:
contract inspector: John Palmieri	date: Oct-18 97
government inspector:	date:

DIRECTIONS: Before any machinery or mechanized equipment is placed in use it shall be inspected and tested by a competent mechanic and certified to be in safe operating condition. Records of these tests and inspections shall be maintained at the site by the contractor and shall be made available upon request to the designated authority (16.A.01). This checklist is to be completed annually for Government equipment and records maintained at the field project for inspection review.

FURTHER: any machinery or mechanized equipment found by the contractor or the designated authority to be unsafe shall be deadlined and its use prohibited until all unsafe conditions have been corrected (16.A.03).

The general requirements section of this checklist shall be completed for all cranes, shovels, derricks, draglines, cranes equipped with pile drivers, pile drivers, pavers, scrapers, graders, pans, loaders, dump trucks, and similar heavy equipment. The applicable appendices shall also be completed:

___ Appendix A: Cranes, Derricks & Material Hoists
___ Appendix B: Rigging
___ Appendix C: Earth Drilling Equipment
___ Appendix D: Conveyors
___ Appendix E: Motor Vehicles and Aircraft

Corps of Engineers Safety and Health Requirements Manual, EM 385-1-1, Oct 92, references are in parentheses - consult them for more specific guidance

NOTE: The expected answer to all questions is yes or n/a. You must explain all 'no' answers.

	yes	no	n/a
1. Are there records documenting the inspection and testing of all machinery/equipment on site? (16.A.01)	✓		
2. Is the slow moving emblem used on all vehicles which by design move at 25 MPH or less on public roads? (08.A.04)			✓
3. Are all vehicles which will be parked or moving slower than normal traffic on haul roads equipped with a yellow flashing light or flashers visible from all directions? (16.A.12)			✓
4. Are vehicles and equipment operating in aircraft movement areas identified by a flag on a staff attached to and flying above the vehicle? (32.A.10)			✓
5. Are all tanks, contains, and pumping equipment, portable or stationary, used for flammable or combustible liquids, tested by a recognized authority? (09.B.10)			✓
6. Do all vehicles used to transport or dispense flammable or combustible liquids carry a fire extinguisher of not less than 20 B-C units? (09.B.03)			✓

SAFETY CHECKLIST: GENERAL REQUIREMENTS

	yes	no	n/a
7. Are all non-current carrying metallic parts of electrical equipment or equipment enclosures provided with a ground? (11.C.01)			✓
8. Are electrical cables in good condition and are insulated hot sticks available? (11.E.01)			✓
9. Is all equipment to be operated on public roads provided with: (16.A.07) a. headlights? b. brake lights? c. taillights? d. back-up lights? e. front and rear turn signals?			✓
10. Is the slow moving vehicle emblem used on all vehicles/equipment which by design move at 25 MPH or less on public roads? (08.A.04)			✓
11. Are seats and seat belts provided for each rider on equipment? (16.A.07 and 18.B.08)	✓		
12. Is all equipment with windshields equipped with powered wipers and defogging or defrosting devices? (16.A.07)			✓
13. Is all mobile equipment equipped with adequate service brake systems and emergency brake systems? (16.A.07)	✓		
14. Is there a record of manufacturer's approval of any modification of equipment which affects its capacity or safe operation? (16.A.18)	✓		
15. If present, are steering or spinner knobs properly installed? (16.A.19)	✓		
16. Are the following adequately guarded: (16.B.03) a. belts, gears, shafts, pulleys, sprockets, spindles, drums, flywheels, chains, and other reciprocating, rotating or moving parts? b. uninsulated hot surfaces, including exhaust pipes? c. accessible charging skips?	✓		
17. Are areas on equipment where employees walk or climb equipped with platforms, footwalks, steps, handholds, guardrails, toeboards and non-slip surfaces? (16.B.03)	✓		
18. Are fuel tanks located to prevent fuel spills onto the engine, exhaust, or electrical equipment? (16.B.04)	✓		
19. Is all self propelled equipment equipped with automatic, audible, reverse signal alarms? (16.B.01)	✓		
20. Are exhaust and discharges located so as not to obstruct the operator's view? (16.B.05)	✓		
21. Do all high rider industrial trucks have overhead guards which meet ANSI/ASME B56? (16.B.09)	✓
